We believe in curiosity and a hunger for positive change.
We believe ideas can change the world.
We believe innovation and creativity drive human progress.

Woodside is Australia’s largest independent oil and gas company with a global portfolio, recognised for our world-class capabilities – as an explorer, a developer, a producer and supplier of energy. Our producing LNG assets in the north-west of Australia are among the world’s best facilities, including the North West Shelf Project and Pluto LNG Plant.

Today, we continue to be at the forefront of our industry by seeking to grow new markets for LNG. To achieve this we are planning for Australia’s first LNG fuel hub to capture growing land and marine LNG fuel markets. As a low-cost energy supplier with a sustainable business model, we are pursuing opportunities to deliver affordable energy to the world’s growing markets.

Our global exploration portfolio includes emerging and frontier provinces in Australia and the Asia-Pacific region, the Atlantic Margins and Sub-Saharan Africa. We have significant equity interests in high-quality development opportunities in Australia, Senegal, Myanmar and North America and are examining new concepts, technology and contracting strategies to enable the earliest commercialisation of these resources in line with global demand.

We believe technology and innovation are essential to bringing down costs and unlocking future growth. Today, we are pioneering remote support and the application of artificial intelligence and advanced analytics across our operations.

A world of change

New technologies are deconstructing and accelerating how business success can be achieved and maintained. The oil and gas industry is morphing under this dynamic new world. Rising stakeholder expectations and alternative technology-led energy sources are creating an environment where only the most innovative will remain competitive.

Innovation has always been in our DNA. Dating back to the 1950s, we defined world record depths in offshore southern Australia. We built the world’s first moored standardised natural gas (LNG) plant and our multilateral wells in the deeper water Vincent field were a global breakthrough.

Today, we’re pioneering remote support and the application of cognitive computing, predictive analytics and artificial intelligence in our operations.

In fact, we’ve always relied on the ingenuity of our people to discover new resources, lower costs and maintain the longevity of our operations.

What’s changed is the scale and complexity of the challenges we face. An inward looking approach won’t sustain our ability to compete against new or changing competitors. An inward looking approach won’t sustain our ability to compete against new or changing challenges we face. An inward looking approach is the approach we need to take to discover new resources, lower costs and minimise the risk of high-risk or error-prone tasks to improve efficiency and performance.

We’re growing a community of exceptional thinkers and innovation that can work shoulder to shoulder with us to accelerate growth for a better future.

By collaborating with researchers, entrepreneurs, subject matter experts and parallel leading industries, we aim to leverage our capabilities and sustain our leading position as a partner of choice. This dynamic network is expected to create a world-class legacy of technological excellence in Western Australia.
